WITH AMBER WAVES DIVING EVERY WEEKEND IS A DIVE WEEKEND

NOW READY FOR BLUE WATER

PADI SCUBA REVIEW OR JUST COME AND PLAY ANDOVER BRANCH YMCA POOL SATURDAY April 7

Why PADI Scuba Review?
Are you a certified diver, but haven't been in the water lately? Are you looking to refresh your dive skills and knowledge? Are you a PADI Scuba Diver and want to earn your PADI Open Water Diver certification? If you answered yes to any of these questions then PADI Scuba Review is for you.

What do I need to start?
Hold a scuba certification
Minimum age: 10 years old

What will I do?
First, you'll review the safety information you learned during your initial training. Then, you head to the pool to practice some of the fundamental scuba skills

How long will it take?
A few hours

What will I need?
If you don't have your own gear you will need to rent gear.

I don't want a review, but I want to play?
No problem, Just sign up and come play in the pool for a couple of hours....we want you diving!

- \$45.00 for Refresher (includes gear rental)
- No Refresher, don't have gear, but you want to play? Full gear rental \$38.00 fee
- Have all your gear but just want to play? \$15.00
-

STARTS AT 12:30

YES, IT'S TRUE AMBER WAVES DIVING CO. IS NOW A 5 STAR INSTRUCTOR DEVELOPMENT CENTER.

What is a dive computer?

Maybe you have learned a little bit about dive computers during your diving course or even had the opportunity to dive with it. But what is actually a dive computer? A dive computer is an electronic device that divers are using to get all the information to ensure a safe dive and avoid decompression sickness.

Via a display you can instantly and dynamically see your bottom time, depth, safety stop, ascent rate etc. All very valuable information that you need to have to make sure that your dive is safe without spending time on statically calculating your dive with a RDP or wheel.

What are the advantages of a dive computer?

A dive computer is obviously giving you a lot of benefits. To start with, it will make your dive more enjoyable because you will make all the time in the world to look to the environment instead of worrying about following your pre planned dive.

The truth is, you can't always follow your planned dive – you may see something awesome under water, for example, like if you do get to see your first turtle swimming by then there will be no problem whatsoever. Your diving computer will automatically calculate how long you can safely stay on that depth.

Additionally, the dive computer will give you dynamic information. In other words it is constantly giving you updated data ensuring safer dives. And finally, because of its accurate calculations a dive computer will even help you to maximize your dive time. To sum it all up: a dive computer is supporting you in a very safe way to make the most out of your dives!

How do dive computers work?

Dive computers are pretty high-tech pieces of kit: They have three key parts built-in: A clock, a pressure sensor, and a series of dive tables (not entirely unlike the tables you learned to use in your Open Water diving certification course).

Whilst the technology is top-shelf, you'll be glad to hear that a dive computer is extremely easy to use. That is probably also a reason why you see so many divers using them. From the moment you descend your computer will automatically start to give you updated information about how deep you can go, how long you can stay there, your total dive time and safety stop count down.

Remember you learned about 'SAFE – Slowly Ascend From Every Dive' Your computer is going to come in handy there as well – it'll keep an eye on your ascent accurately, keeping you informed by sound or graphics when swimming up too quick. While staying on the surface your dive computer will continue to calculate how long you stay out of the water ensuring safety for additional dives.

Do I need to have one?

These days a lot of divers are using a dive computer. You have seen that the reason why is actually quite simple. A dive computer is extremely easy to use and gives you all the information you need to ensure a safe dive and avoid decompression sickness. If you want to stay flexible and keep control over your dive you better use a dive computer so you can spend all your time enjoying the beauty of the underwater world. It is of course up to you to decide to buy one.

Why PADI Equipment Specialist?

Whether it's a regulator problem, a wet suit tear or a broken mask strap, the Equipment Specialist course can help. This Specialty course prepares you for the basic equipment maintenance, care and adjustments you'll encounter every day. In addition, you'll get the valuable background on equipment repair and purchase, making you better able to protect your investment.

What will I do?

During your PADI Equipment Specialist program, you'll familiarize yourself with the operation and maintenance of your personal equipment. We will also provide you the opportunity to review new or unfamiliar dive equipment.

The program is not an equipment repair program but it does give you:

- Theory, principles and operation of dive equipment.
- Routine recommended care and maintenance procedures.
- Common problems with equipment and recommended professional maintenance procedures.
- Simple suggestions for comfortable equipment configurations and an introduction to new equipment.

This is a good course to count towards your Advanced or Master Scuba Diver certification. It's all classroom and it also gets you ready for the dive season That's just around the corner!

CALL TODAY TO SCHEDULE

SHERWOOD WISDOM 2 COMPUTER WITH QUICK DISCONNECT MSRP \$911
